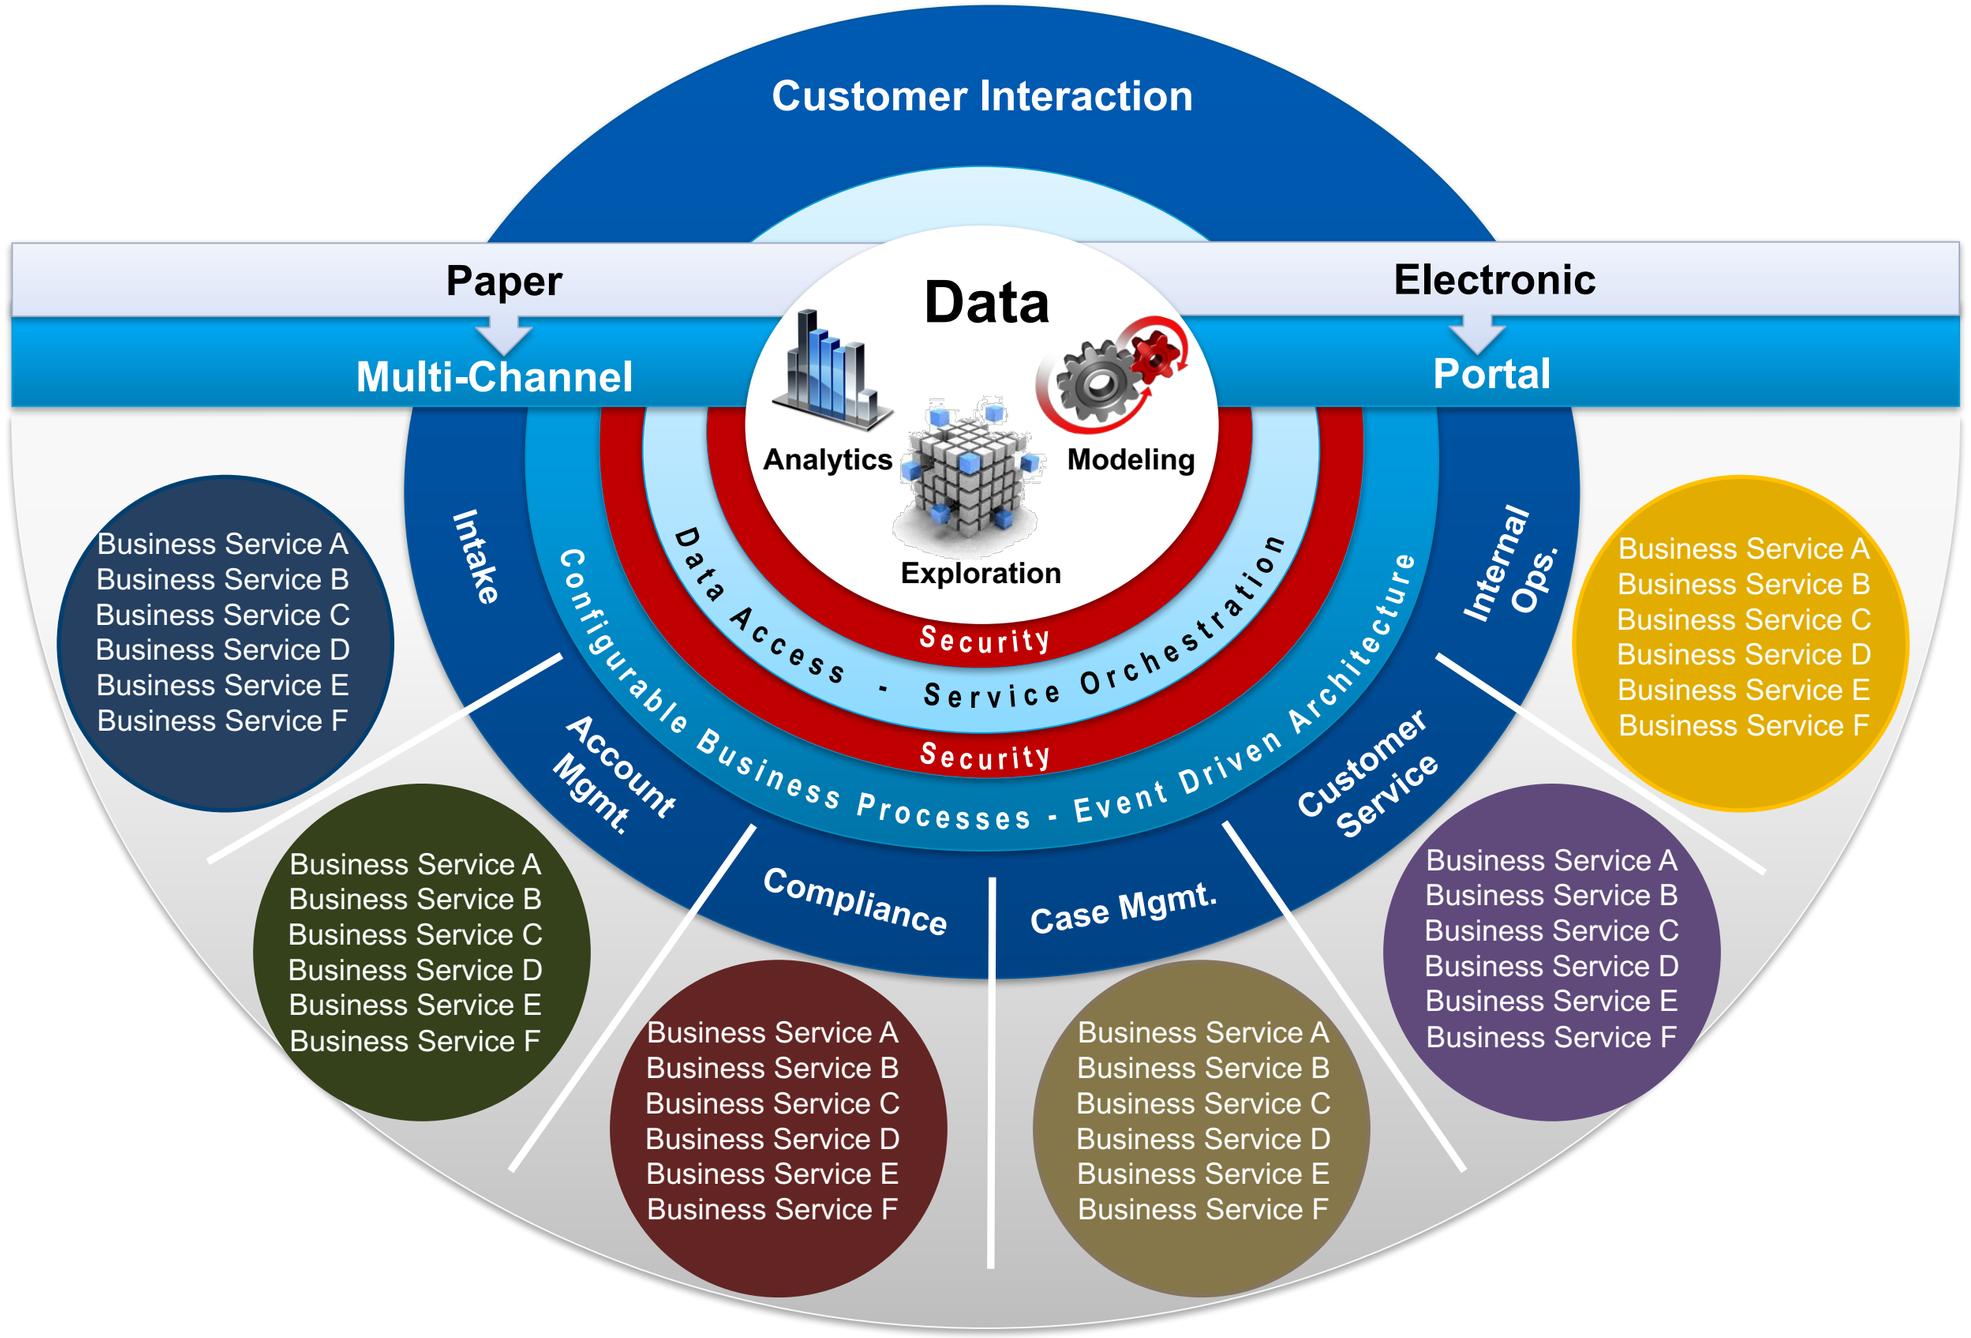
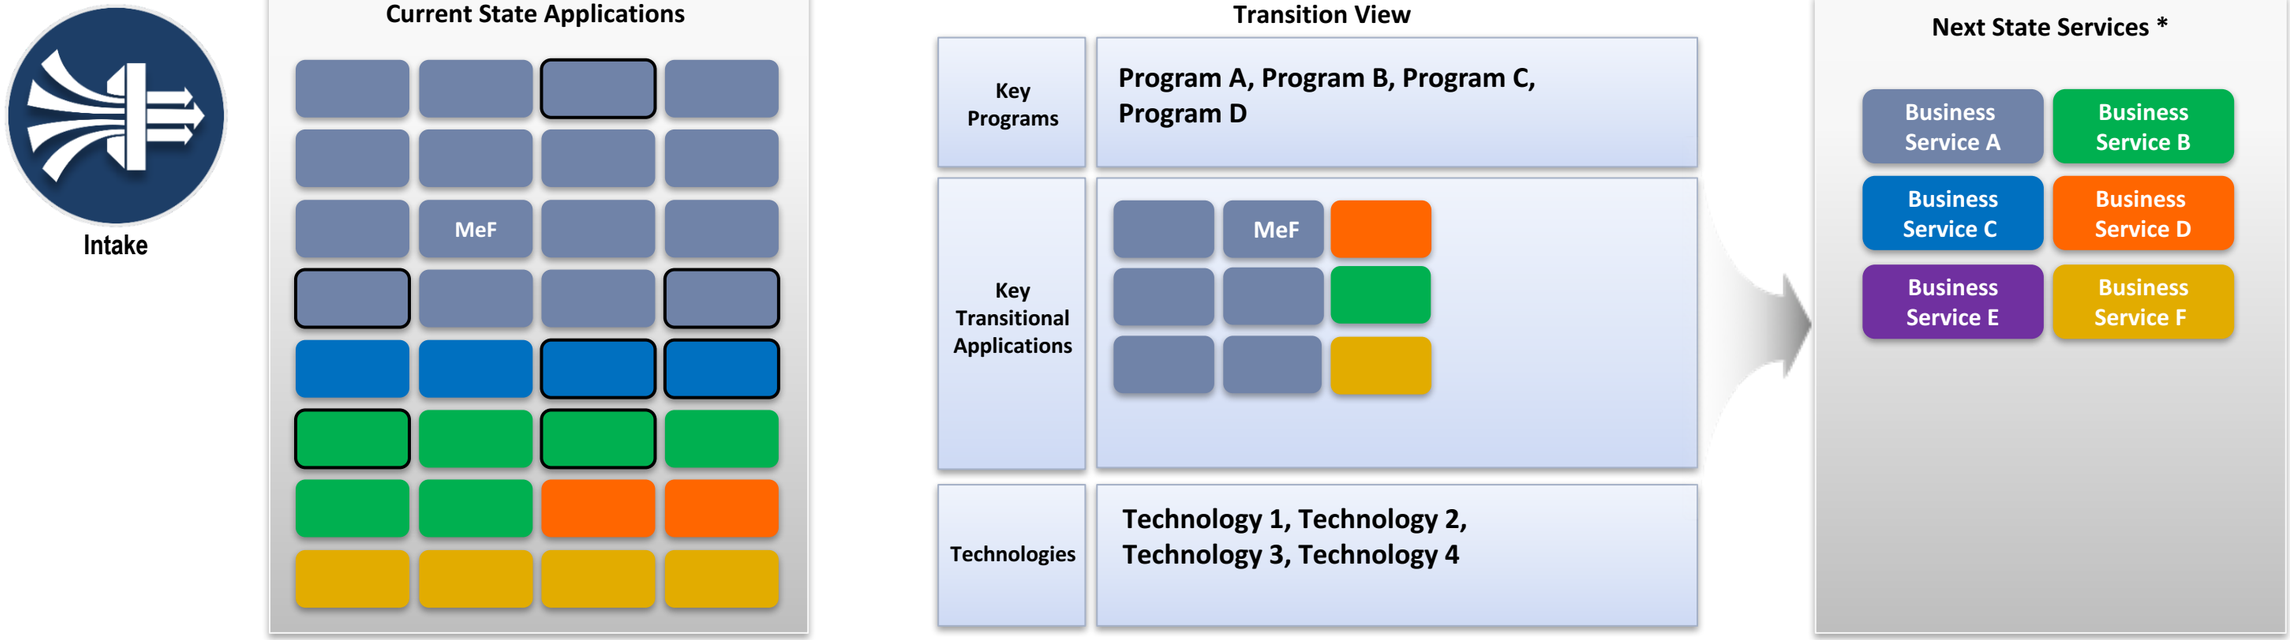
IRS Technology Roadmap



For Official Use Only – Release 5.3, 09/29/17

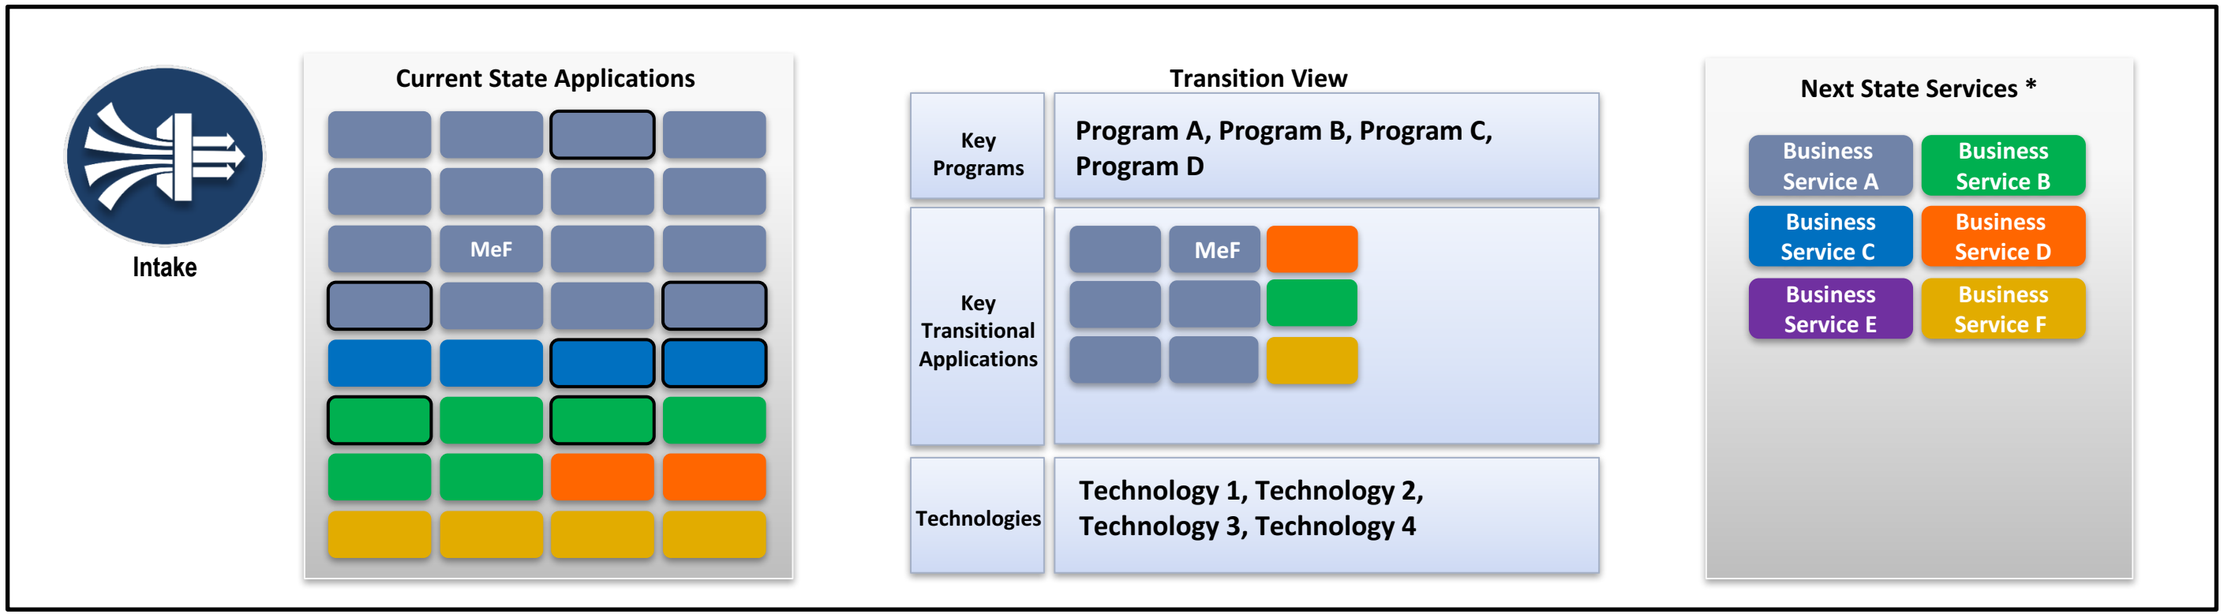
Transition View (part 1 of 8)



Legend:

1. Color coding of applications (Current State and Transition View) and services (Next State View) is used to reflect how groupings of applications will migrate over time to the next state services.
2. Each color represents a service in the Next State view, with the associated applications that will deliver those services color coded in the same color in the current state and transition view
3. Colors in one business area (i.e., swim lane) are not intended to have any relation to the same color used in a different business area
4. A solid black border around a Current State Application indicates that the color reflects only one of multiple Next State Services required to transform that application.
5. The “TBD” is used where IRS has yet to determine which of the existing programs will deliver these services

* Mapping of Current State and Key Transitional applications to their primary Next State Service is based on SME input.
** Transitional applications that support Perfection next-state service have not been identified as of this version.
*** Many current state application support functionality that would migrate to Calculator next-state services. These mappings have not been identified in the current revision due to the level of detail involved.

Target Service Details


Service	Description
Business Service A	Xxxxxxxxxxx
Business Service B	Xxxxxxxxxx
Business Service C	Xxxxxxxxx
Business Service D	Xxxxxxxxx
Business Service E	Xxxxxxxx
Business Service F	Xxxxx
